- Results-driven Data Scientist with _____ of experience developing scalable ML pipelines, deploying production-grade AI models, and delivering actionable insights.
- Proven expertise in NLP, fraud detection, MLOps, and deploying LLMs using RAG pipelines, AutoGen agents, and Azure AI Search. Adept at building cloud-native applications using Python, SQL, Flask, and cloud platforms (AWS, Azure).
- Experienced in applying a range of statistical techniques such as regression, classification, clustering, sentiment analysis, and ensemble methods across structured and unstructured data sources.

- _____ Python, SQL, R, Scala, C++
- _____ Pandas, Numpy, Scikit-learn, Py-Torch, Tensor-flow, Keras, Matplotlib, Seaborn, Django, Flask, Flask SQLAlchemy
- _____ Deep Learning, Decision Trees (CART), Ridge Lasso Regression, Res Net, Naïve Bayes, KNN, SVM, Boosting Random Forest, Classification, Clustering, Transformers, RAG, LLMs (LLaMA, Azure OpenAI), Data Manipulation, Data Visualization, Data Analysis
- _____ CI/CD, Model Deployment, Monitoring, AutoGen Agents, Document Intelligence
- _____ MySQL, MongoDB, PostgreSQL, NoSQL
- _____ Amazon Web Services (IAM, EC2, RDS), GCP (Big Query), MS Azure (Azure data factory, Azure Data Lake)
- _____ FastAPI, Docker, Git, Azure DevOps, Hadoop, Spark, Power BI, Tableau, Jupyter, RStudio
- _____ Waterfall, SDLC, SCRUM, Agile
- _____ Analytical Thinking, Curiosity & Continuous Learning, Problem-Solving Ability, Adaptability, Time Management

- Increased credit risk classification accuracy by _____ by deploying fraud detection models using _____ and _____.
- Improved segmentation accuracy through _____ analyzing transactional narratives and customer behaviour.
- Processed _____ using _____, _____, and _____ for high-performance ETL and validation.
- Built and deployed secure RESTful APIs using Flask and SQLAlchemy on _____ and _____ cloud platforms.
- Integrated _____ - _____ and _____ with _____ architecture and _____ for contextual analysis. Developed intelligent agents with _____ to automate financial domain queries.
- Enhanced real-time decision-making with _____ dashboards, boosting operational efficiency by _____. Led _____ implementation using _____ and _____.

- Built an AI-powered NLP solution leveraging LLaMA-based large language models to extract and summarize insights from unstructured financial documents in real-time.
- Applied prompt engineering and integrated with Flask APIs and AWS RDS, embedding outputs directly into Power BI dashboards for dynamic business intelligence.
- Achieved a 40% reduction in analysis time, accelerating decision-making and improving financial reporting workflows.
